                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to novel nucleic acid sequences derived from rat CC dermal papilla, human keratinocytes and meonatal foreskin fibroblasts, CC and mouse embryonic skin, keratinocyte stem cells and transit amplifying CC cells. Polypeptides of the invention may be used to treat inflammation, CC cancer and neurological diseases. The proteins may be used to stimulate CC the growth and motility of keratinocytes, to inhibit the growth of CC cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to CC inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle CC disorders. Sequences AAZ61606-Z61832 represent cDNA sequences derived CC from several mouse, rat or human skin cell types. Sequences derived CC AAZ61606-Z61649, AAZ61725-Z61785, AAZ61802-Z61811 and AAZ61826 encode proteins with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences AAZ61650-Z61668, AAZ6176-Z61780, AAZ61812-Z61817 can semembrane domains.

                                                                                                                                                                                                                                                                                                                                                                                                  The present polynucleotide encodes a polypeptide which is expressed i mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cel modulating angiogenesis, inhibiting angiogenesis and vascularisation tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency vi (HIV)-1 to leukocytes, and treating inflammmatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of oligonucleotides for examining expression patterns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO protein, agonists, antagonists or anti-PRO anti-PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and

                                                                               Вþ
                                                                                                                Qγ
                                                                                                                                                          В
                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                                                                           The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins or an invention describes have cytostatic activity. The PRO proteins or an invention of an invention of a consistency of bloactive molecules, such as compared to take the product of the produce transfer of anti-sense RNA and DNA. They may also be used to produce transferic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF4470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44087 to AAF44269 and AAB65310 represent human PRO polynucleotide and protein or sequences. AAF44087 to AAF44269 and the exemplification of the present invention.
                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-JUL-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK5345) and the encoded polypeptides (AAK9323-AAM80302) that exhibit activity elating to encoded polypeptides (AAK98323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Xue

cc human, dog, monkey, mouse, hamster or rat. The disorders include cancers cc such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such cc as multiple sclerosis, connective tissue disease, include cancers cc disorders such as parkinson's disease, Alzheimer's disease, Huntington's connective tissue disease, nervous system cc disorders such as parkinson's disease, Alzheimer's disease, Huntington's cc chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and cc Wernicke disease, inflammatory disorders such as nephritis, Crohn's cc disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory cc bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, cc activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to cartilage, tendons and ligaments and in tissue repair and burn healing. Cc wote: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO cat fire.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28-FEB-2000;

CC antidiabetic, hypotensive; dermatological; immunosuppressive; accounting hypotensive; dermatological; antifungal; antirheumatic; cc antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; cc antiinflammatory; and antianaemic. The sequences can be used for determining cc the presence of or predisposition to, or preventing or treating cc pathological conditions associated with an ORRY-associated disorder. The cc nucleic acids can be used to express ORFX proteins in gene therapy cc vectors. The proteins and nucleic acids may be used to treat cancers, cc proliferative disorders, neurodegenerative disorders, osteoarthritis, cc graft vs host disease, cardiovascular disease, diabetes mellitus, cy typertension, hypothyroidism, cholesterol ester storage, systemic lupus cerythematosus, severe combined immunodeficiency (SCID), AIDS, viral, concernal or fungal infection, malaria, autoimmune disorders, asthma, callergies, aplastic anaemia, burns, wounds, bone and cartilage damage, cc coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC74446 to AAC77606 encode the proteins given in AAB40237 to which represent the human ORFX open reading frames 1 to 3161. sequences have activities such as: cytostatic; hepatotropic;
